

# ILLUSTRATED GUIDE TO DECKS

**TOWN OF TOLLAND  
BUILDING DEPARTMENT  
860-871-3601**

The purpose of this handout is to provide illustrations of common deck construction techniques. It is not the purpose of this handout to endorse any of the methods show or limit designs to those shown here. The techniques shown may not be suitable for some designs, soil types, or locations. While every attempt has been made to insure the correctness of this handout, no guarantees are made to its accuracy or completeness. Responsibility for compliance with applicable codes and ordinances falls on the owner or contractor. For specific questions regarding code requirements, refer to the Minnesota State Building Code or contact your local Building Department.

For charts on joist/beam spans, column/footing sizing, and cantilever projections, see the handout "Decks".

# FOOTINGS

## ANCHORING POST

## WHERE DO I PUT MY FOOTINGS?

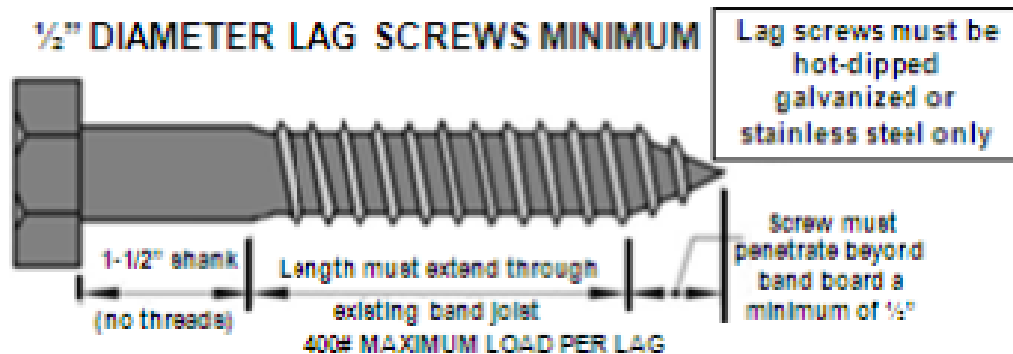

## THE REQUIRED AREA OF THE COLUMN SHOULD FULLY BEAR ON THE FOOTING

## ATTACHING LEDGERS

The lag screws or bolts shall be placed 2 inches in from the bottom or top of the deck ledgers and between 2 and 5 inches in from the ends. The lag screws or bolts shall be staggered from the top to the bottom along the horizontal run of the deck ledger.

**OR EQUIVALENT "LEDGERLOK"-TYPE SCREWS

# FLASHING LEDGERS

# HOUSE CANTILEVERS

House cantilevers are usually not designed to support the weight of a deck and require special framing

## GUARDS

GUARD IS REQUIRED IF DECK IS MORE THAN 30 INCHES ABOVE GRADE

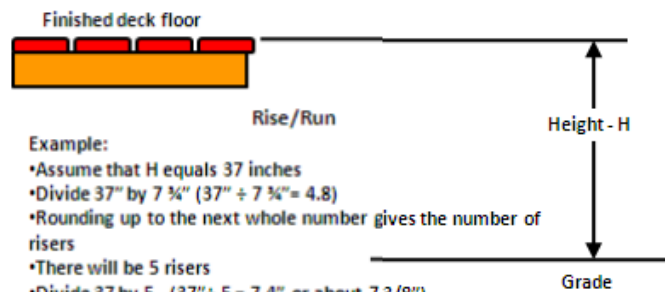

## STAIR TERMINOLOGY

Stair Basics

- The maximum riser height is 8 inches
- The minimum tread run is 9 inches
- Treads and risers should be approximately equal with the largest not exceeding the smallest by more than 1/4 inch.

## DETERMINING RISE/RUN

Example:

- Assume that H equals 37 inches
- Divide 37" by 7 3/4" ( $37" \div 7 \frac{3}{4}" = 4.8$ )
- Rounding up to the next whole number gives the number of risers
- There will be 5 risers
- Divide 37 by 5. ( $37" \div 5 = 7.4"$  or about 7 3/8")
- Each riser will be 7 3/8"
- For 5 risers there will be 4 treads
- Since each tread must be at least 10", the length of the stair from the face of the deck to the face of the bottom riser will be at least 40" ( $10" \times 4 \text{ treads} = 40"$ )

## LAYING OUT STAIR JACKS

Cut an amount equal to the thickness of the tread from the bottom of the stair jack

# STAIR REQUIREMENTS

## HANDRAILS

**HANDRAILS MUST RETURN TO A NEWEL POST AND BE CONTINUOUS WITHOUT INTERRUPTION FOR THE LENGTH OF THE FLIGHT**

## COMPOSITES AND OTHER DECK/RAILING PRODUCTS

**THIS HANDOUT DOES NOT COVER DECK OR RAILING PRODUCTS MADE OF COMPSITES, ALUMINUM, STEEL, GLASS, OR ANY OTHER MAN MADE PRODUCT. THOSE PRODUCTS MAY BE USED IF THE MANUFACTURER HAS A RESEARCH REPORT FROM THE INTERNATIONAL CODE COUNCIL AND THE PRODUCT IS INSTALLED IN STRICT ACCORDANCE WITH THAT REPORT.**
